Megatiker product line has the possibility to supply both in “direct” and “reverse” feed.

If “direct”, the word “LINE” needs to be marked on supply terminals (normally the top ones), as well as “LOAD” has to be written on the output terminals to be connected to the load (normally the bottom ones).

If “reverse”, any indications about LINE / LOAD are NOT expected on the product.

6.4 Electrodynamic forces

The table below shows an indication of suggested distances to keep between the breaker and the first fixing point of the conductor and bars in order to reduce the effects of the electrodynamic stresses that may be created during a short circuit. In the realization of anchorage system it is recommend the use of isolators suitable for the type of conductor used and the operating voltage.

I_{cc} (kA)	Maximum Distance (mm)
36	350
50	300
70	250
100	200

According to conductor type and bar system (except Legrand bar kits), the choice of the distance to keep is to be calibrated by the installer.

Also installer must take into account the weight of the conductors so that this does not affect the electrical junction between the conductor itself and the connection point.

General remarks on protection unit

The protection units Li/Lsi/Lsig are normally supplied by the internal current transformers (CTs).

When the current flowing through the circuit breaker is greater than 12% of the maximum power (20% of I_n for single phase load), the internal current supply ensures all operation of the protection unit, included LED status, display indications(*) and diagnostic functions (e.g. trip test).

(*)Display backlight and integrated measure (if available) are instead guaranteed starting from 20% of the maximum power (35% of I_n for single phase load), in absence of any other supply. In any case the external power supply is strongly recommended for the correct working of measurement, as well as RS485 communication. To ensure the same performance when the load is less than 12% of the maximum power (20% of I_n for single phase load) to grant complete functions, one of the following optional power supplies can be used:

- (*)external Auxiliary power supplier or, alternatively, Modbus communication interface.
- (*)power supply temporarily connected to frontal USB socket, connected to a 5V DC power bank or PC.
- (**)power supply temporarily connected to frontal Service port, connected to specific adapter for PC (Legrand use only)

(*) available only for Lsi/Lsig versions

(**) available only for Li versions

In the electronic unit protection type Lsi/Lsig, an energy metering central unit, if available, is integrated.

9.10 Specific accessories for electronic version

Auxiliary power supply

- For supplying electronic units ref. M7ALIM
- Is used to supply Megatiker electronic circuit breakers Lsi/Lsig with / without earth leakage module and with / without energy metering central unit.
It is mandatory in case of electronic breakers with integrated measure and not interconnected in a supervision system (MODBUS network not requested) to correctly manage the measure functions

- Technical characteristics:
- Input voltage: 24V ad/dc (+/- 10%)
 - Enclosure: 2 DIN modules
 - Output: up to 250mA (to supply many circuit breakers according to the following table):

M7ALIM	DPX ³ 250 / 250HP / 630 / 1600	[mA]
I _{out} MAX = 250 mA	Electronic/Electronic + RCD (S2/Sg)	50
	Electronic/Electronic + RCD with power metering (S2/Sg)	62.5
	Electronic/Electronic + RCD (S10)	70
	Electronic/Electronic + RCD with power metering (S10)	83

According to single absorptions, it can be possible to connect more than one breaker

- MODBUS communication**
- RS485 MODBUS communication interface ref. M7COM
- Is used for sharing on MODBUS network all information managed by Megatiker electronic circuit breakers Lsi/Lsig with / without earth leakage module and with / without energy metering central unit.
- Technical characteristics:
- USB local PC connection
 - Input voltage: 24V ad/dc (+/- 10%)
 - Enclosure: 1 DIN modules
 - MODBUS address configuration / transmission mode / transmission speed by physic configurators
 - Output relay (220V – 0,2A): to signal tripped position
- Consumption: 90mA
- It is possible to connect only one breaker to the interface.

- In case of use of MODBUS interface M7COM, the external power supply module M7ALIM is not necessary because the external power is already provided by the MODBUS module
- Megatiker electronic interface - EMS BTDIN**
- For connecting electronic Megatiker (M3 250, M4, M5) to an EMS communication network. All the informations managed by circuit breaker's electronic card will be shared on the EMS network
- Dimension: 1 module
Power supply: with EMS BTDIN power supply module F80BA
Address can be modified and set locally by DIP switches or remotely with the help of the EMS configurator software
- ref. M7EMS

- Bluetooth communication key**
- USB key for BLE communication with electronic Megatiker S10 (M3 250, M4, M5) to configure, monitor and manage it remotely through App Connection port USB on front of the circuit breaker
- ref. MPXX02

EnerUp + Project App for smartphone and tablet available on Apple Store and Google Play Configuration, monitoring and management software (PCS) available for download via e-catalogue (does not require the use of Bluetooth communication key Ref. MPXX02)

- Modular power supply**
- 230 V ± - 27 V= - 0.6 A (2 modules) ref. BT-E49
- Touch screen**
- To show data collected different protection devices. It can manage up to 8 devices ref. PM1TS
